What Is Ungrading and How Can It Unleash Your Students' Potential?

The traditional grading framework can be flawed. One glaring flaw is how it does not incentivize student learning. Fortunately, regardless of the type of class being taught, ungrading is a solution for everyone, allowing students to better close the loop on their learning along with additional benefits for students and educators themselves. But what is ungrading?

This 20-Minute Mentor introduces the concept of ungrading and provides some big picture examples of how ungrading works in different types of courses, including STEM courses. The expert presenter will explain the problems and drawbacks of a traditional

grading framework and how ungrading can overcome them. Additionally, the presenter will demonstrate strategies for implementing ungrading in a classroom including ways to get students onboard, how to incentivize students, and how to determine summary grades.

Upon completion of this program, you'll be able to:

- Describe certain issues with a traditional grading framework
- Define ungrading and its benefits
- Determine a variety of ways that ungrading may fit into your course
