## What Brain-Based Techniques Can I Use to Engage Students During Class?

This 20-Minute Mentor demonstrates several techniques to engage student brains in learning. All can be incorporated into either a traditional 50-minute or a longer class period. Since each students' brain is unique and may learn in different ways, the presenters offer specific techniques that help vary the learning experience during a typical classroom time frame. This includes patterning activities, organization and cueing, and creating the emotional impact of the lesson.

**Upon completion of this program, you'll be able to:**

- Understand what patterning is and what patterning activities you can use in your classroom
- Pinpoint classroom analogies and how can you use them in your class
- Direct patterning in your students
- Learn how to maximize student brainpower to improve student success
