# How Can I Use AI to Create Multimedia Teaching Materials?

Instructors often spend a lot of time creating materials for their courses, such as slides or images. However, by learning to effectively use generative Artificial Intelligence (AI) tools to generate multimedia teaching materials, instructors can begin to cut down the menial aspects of their job and gain more time to focus on content delivery and engaging with students.

This Magna 20-Minute Mentor shows you how to do just that! Join Jeremy Caplan, Director of Teaching

and Learning at CUNY, as he demonstrates the time-saving capabilities that AI can bring you.

Upon completion of this program, you'll be able to:

- Use AI to generate images, slides, audio/video, transcripts, and summaries for classroom use
- Use AI to reduce menial work and free up more time for the human aspects of instruction

Available from  
Monday, February 19—  
Sunday, February 25, 2024
